

VACUUM SUCTION CUP

VSC001

The Vacuum Suction Cup is ideal to lift, position and set large format tiles and has a holding power of 110kg when used on clean, smooth, non-porous surfaces. It features a pump action with safety indicator which shows there is sufficient pressure. The Vacuum Suction Cup has an anti-slip treatment and works on granite, tile, stone, glass, ceramic, marble and other non-porous materials.

User Tips:

Ensure tile being lifted is as clean as possible for optimal hold. Take off the protective cap. Press the rubber seal of the Vitrex Suction Cup directly to the tile. While applying pressure, push in the pump handle repeatedly until red line stays hidden inside the unit. Make sure the Vitrex Suction Cup is secure before attempting to lift the tile. Set tile in place. Push top of the release valve lever towards the unit to release the pressure. Remove Vitrex Suction Cup from tile, wipe the rubber seal and return the protective cap
